

HOW DO I LEARN?

On 7th day after the birth, babies starts observing the surrounding learns to track surrounding objects.

I remember when I was a child lot of questions knocks to my head. I used to ask many questions to my parents, cousins and school teachers. Sometimes they solve my questions and sows new seed in my head for another question.

Incidents:

When I was in school. One day I was playing with ironing (iron machine) and my uncle started shouting at me that “Istri (Iron) ke sath khel mat vo kharab hui hai, uska wire bhi khula hai. Tujhe shock lagega” when I asked him what is a shock? He literally gave me electric shock. After few days I was playing with single wire and I was trying to put both the end of that wire in an electric socket. Again my uncle saw me and shouted at me saying “aisa kuch kar mat nahi tho short circuit hoga”. “Short circuit” word created curiosity in my mind. To get to know how short circuit happen? In the afternoon when everyone slept tried this experiment and electricity went.

As time passed to solve my own doubts (how, why). Purposely I started doing many mistakes to get the experience to learn many things.

In shorts I learn by:

1. Observing others
2. Visualizing
 - a. World war (In school)
3. Drawing
 - a. So in Marathi language textbook there was one lesson on “Damdi” (a girl who carries wooden block and grass). On this lesson there was a question that Explain Damdis character. So remember her characters I use to draw her in my rough book. (How she look? And what she wears?)
4. listening elders conversation
5. Debating
6. Challenging others opinions
7. Questioning existing solutions
8. Experiencing
